Work Experience

STL Digital

Apr 2023 - present

Data Engineer (Client - Adobe)

- Working as a data engineer on an internal tool "Relay" which is used as a test automation tool for other Adobe products.
- Created ETL/ELT jobs for generating customized dynamic reports of test results, and daily/monthly cost or resource utilization.
- Implemented OpenCV for image-based validations, ALS for recommendation of test steps, and clustering for user segmentation.
- Worked on designing and migrating the workload from mongoDB to S3.
- Worked on the creation of a central dashboard for this tool for getting unified view of many dimensions.

STL Digital

Oct 2022 - Apr 2023

Data Engineer (Client - IBM)

- Worked on IBM Watson which is a Digital assistant for repetitive tasks.
- Create Data Pipelines where the data was extracted from API, and after the required transformation, it was served to users through Watson.
- Provided the validation checks for input and extracted data, so the quality of data is maintained.
- Did some POC on NLP for getting different tokenized words for utterances for Watson skills.

TCS

Aug 2021 - Sep 2022

Automation Engineer

- Designed and implemented test automation framework for the Mobile and desktop using Appium, Selenium, Java, and TestNG.
- Created TestSuites using Maven and configure Jenkins for automated daily build verification runs.
- Implemented Email-based notification alerts for the results of triggered testsuite for reporting.

TCS

Sep 2020 - Jun 2021

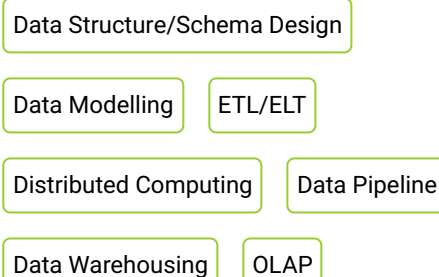

Data Engineer (Client - Adobe)

- Monitored and maintained Azure data factory for daily ETL jobs.
- Written transformation code for batch jobs as per the requirements.

Technical expertise

Skills / Exposure

Methodology/Approach

Tools

Education

Bachelor of Engineering - ME
SIRT, Bhopal Aug 2016 -Aug 2020

Key Projects / Involvements

- Created a Telegram chatbot using OpenAI's GPT3 model to get responses of the model. Hosted the backend of the chatbot on Heroku.
- Created a COWIN vaccination slot notifier using Python, COWIN API, and dataset available for notifying the user whenever a slot is available for vaccination.
- Created ETL project. Extracting the data from HDFS, and processed it using Pyspark, and then writing the data to MySQL for further analysis

Certificates and Awards

- Certified Microsoft Azure Data Engineer
- Awarded with three "On the Spot" awards while working with TCS.
- Awarded with "Customer Delight" award while working with STL Digital.
- Completed and Earned Udemy certificates on Pyspark and Data Technologies.
- Earned 5 Star ranking for python and SQL on Hackerrank
