PROFESSIONAL SUMMARY

Data Engineer around 6 years of experience building scalable batch and streaming data platforms using Spark, Kafka, Airflow, Databricks, and AWS. Experienced in lakehouse architectures, distributed ETL/ELT systems, orchestration frameworks, and analytics engineering for customer-facing and operational analytics platforms. Strong focus on scalable design, reliability, performance optimization, and production ownership Open to work for any location.

SKILLS

Languages: Python, SQL, Java

Big Data & Processing: PySpark, Apache Spark, Kafka, Spark Streaming, Hadoop

Workflow & DevOps: Apache Airflow, Terraform, Docker, Kubernetes, Git, Github Actions, Bash

Cloud & Platforms: AWS (S3, RDS, Lambda, Lake formation, Stepfunction, Glue), Databricks, HDFS

Other tools: FastAPI, Pandas, DBT(Foundational Knowledge)

Data Architecture: Data Lakehouse, Medallion Architecture, Dimensional Modeling, ETL/ELT, Data Warehousing

EXPERIENCE

Adastra Group

July 2025 – Present

Data Engineer

- Owned end-to-end sales funnel analytics platform integrating Google Analytics, CRM, and business datasets into scalable KPI reporting pipelines.
- Redesigned monolithic ETL workflows into modular business-layer processing architecture, improving maintainability, debugging, and operational scalability.
- Designed and implemented Spark-based Bronze/Silver/Gold lakehouse architecture processing 500M+ records daily while reducing compute costs by 40%.
- Managed orchestration, monitoring, infrastructure provisioning and CI/CD using Terraform, and production support for analytics workloads.

Guidewire Software

June 2024 – July 2025

Data Engineer

- Designed 15+ customer-facing datamarts supporting 500+ business users and executive reporting.
- Built Spark-based medallion architecture pipelines for multi-source ingestion and curated data processing.
- Developed orchestration workflows using AWS Step Functions, terraform and Lambda for scalable ETL execution.
- Contributed to Apache Iceberg + Starburst lakehouse POCs, reducing compute cost by 30% through performance optimization.

STL Digital

October 2022 – May 2024

Data Engineer

- Built batch streaming pipelines using Kafka, Spark, and AWS providing large-scale test execution analytics.
- Developed PySpark-based reporting pipelines, delivering operational insights and user analytics like retention, usage pattern, daily-weekly-monthly executions report across internal platforms.
- Implemented image validation workflows using OpenCV and automated media quality verification pipelines.
- Built FastAPI REST services and Airflow test workflows for distributed execution across 100 mobile devices.
- Led 10-member team for 6 month project; delivered OpenAPI Spec-based configurations.

Tata Consultancy Services

September 2020 – September 2022

Data Engineer

- Maintained ETL pipelines on Azure Data Factory and Databricks supporting CRM ingestion and reporting.
- Developed SparkSQL transformation logic and monitored scheduled batch pipelines for operational reliability.

CERTIFICATIONS & AWARDS

- Microsoft Certified: Azure Data Engineer Associate
- AWS Certified Data Engineer - Associate

EDUCATION

Rajiv Gandhi Technical University, Bhopal

Bachelor of Engineering

Aug. 2016 – Aug. 2020

Mechanical Engineering
